Field-only (n = 35)
Greenhouse and field (n = 43)
The Cover Crop Challenge was a valuable activity
It increased my knowledge about the benefits and limitations of cover crops
I have increased knowledge of how environmental conditions (temperature and moisture) affect performance of individual species in a mixture
I have an increased understanding of cover crop seeding rates and costs
I learned more by collecting my own data than if the data had been provided to me
As a result of this activity, I can more confidently convert values to different units
This activity improved my ability to use Excel for data manipulation and visualization
